                                                                                                                                                                                                                                                                                                                          composition is useful for preventing and treating vaso-occulusive and thromboembolic disorders, including myocardial infarction, restenosis, angiopathic thrombosis, including myocardial infarction, restenosis, angiopathic thrombosis, ischaemic cerebral vascular thrombosis, ischaemic cerebral vascular thrombosis, unstable stenocardia, peripheral arterial occulsion, stroke. It is also useful for treating atherosclerosis, oedema and inflammation, cancer and neurodegenerative diseases. The present sequence represents cDNA encoding the Deinagkistrodon acutus antithrombosis enzyme alpha chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300

                                                                                                                                                                                                                             The invention relates to a new Deinagkistrodon actus anti-thrombosis enzyme, where the enzyme hydrolyses fibrin, dissolves blood clots and prevents platelet aggregation. The anti-thrombosis enzyme was administered to rabbits intravenously. Thrombosis was determined before and after the administration at 0.5, 1.0, 2.0 and 3.0 hours by the Chandler method. The enzyme showed anti-thrombosis activity at 0.5 hour following administration at 0.05 micro/kg and this activity was increased significantly at 1.0 hour and at 0.01 micro/kg. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09

The polypeptides, which affect blood coagulation and platelet aggregation system, are useful in therapy and diagnostics. The practical kits for courses related to genetics and molecular biology, practical kits for courses related to genetics and molecular biology, protein chemistry and antibody production and analysis. The polymoclecule or polypeptide can be used as standards or as unknowns for testing purposes. The polypeptides are also useful in identifying proteins by western blotting, protein purification, determining the

The invention relates to new pigmy rattlesnake (Sistrurus miliarius)
venom gland proteins, which affect blood coagulation and platelet
cagregation system. The polypeptides, which affect blood coagulation and
platelet aggregation system, are useful in therapy and diagnostics. The
platelet aggregation system as an educational tool in laboratory
practical kits for courses related to genetics and molecular biology,
protein chemistry and antibody production and analysis. The
polynuclectide or polypeptide can be used as standards or as unknowns
for testing purposes. The polypeptides are also useful in identifying
proteins by western blotting, protein purification, determining the
weight of expressed polypeptides as a ratio to total protein expressed,
identifying peptide cleavage sites, coupling amino and carboxyl terminal
tags, mass spectrometry, circular dicincisms to determine conformation or
faffinity chromatography columns to purify the protein, cloning or
sequencing. The present sequence is Sistrurus miliarius venom gland
protein, Zsnk5 gene.

practical kits for courses related to genetics and molecular biology, protein chemistry and antibody production and analysis. The polynucleotide or polypeptide can be used as standards or as unknowns for testing purposes. The polypeptides are also useful in identifying proteins by western blotting, protein purification, determining the weight of expressed polypeptides as a ratio to total protein expressed, identifying peptide cleavage sites, coupling amino and carboxyl terminal tags, mass spectrometry, circular dichroism to determine conformation or sequencing. The present sequence is Sistrurus miliarius venom gland protein, Zsnk4 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to new pigmy rattlesnake (Sistrurus miliarius) venom gland proteins, which affect blood coagulation and platelet aggregation system. The polypeptides, which affect blood coagulation and platelet aggregation system, are useful in therapy and diagnostics. The polypeptides are also useful as an educational tool in laboratory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises the nucleotide and protein sequences of a salmorin protein derived from the venom of Korean adder. Salmorin protein is composed of an A chain and a B chain, and has inhibitory activity against fibrinogen clotting. The salmorin protein of the invention is useful for treating thrombosis, as it represses fibrinogen clotting potently by binding to prothrombin and thrombin so as to delay blood coagulation. The present cDNA sequence encodes the Korean adder salmorin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  blood anticoagulation activity. The protein was separated from snake venom of Agkistrodon halys brevicaudus (a Korean pit viper) and can be used in the treatment of thrombogenesis. The present sequence encodes the A chain of halyxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Halyxin as blood anticoagulation protein separated from snake venom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to halyxin, a novel protein with very strong

These peptides have the advantage of avoiding significant thrombocytopenia when administered at the minimum dose, for in vivo inhibition of platelet von Willebrand factor binding.

                                 This invention relates to a method for the production of a subunit peptide originating from a polymer protein with disulphide bonds within and between subunits. The method comprises denaturing the protein or its
                                                                                                                                                                                                                                                                           9
                                                                 subunit using a protein dematuring agent in a solution, removing the agent in the presence of a polyoxyalkyl polyether which reacts with a thiol group and unwinds the subunit, and separating the polyoxyalkyl polyether-bound subunit peptide. The method can be used for producing physiologically-active subunit peptides for polymer proteins e.g. snake venom-originated dimer peptide with blood platelet-inhibitory activity on von willebrand's factor. The peptides produced have platelet-binding inhibitory, and thrombolytic activity. The present sequence represents DNA encoding rattlesnake protein used in an example illustrating the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      501 ACGCGACCACGTTAAGATCCGGCTGTGTGAAGTCTGGAGAAGCAAGGAAGCCCCCCCACCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGTTATGAGAATTGGATTGAAGAAGAATCCAAAAAGTGTCTTGGGGGTGCACATAGAGACA 300
Thrombolytic; glycoprotein 1b-binding protein; snake venom; rattlesnake; antithrombotic; glycoprotein 1b; long half life; low antigenicity;
                                                                                                                                                                                                                                       "Antithrombotic wild-type rattlesnake protein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a glycoprotein Ib-binding protein, originating from snake venom, comprising specific mutations and antithrombotic activity. Glycoprotein Ib-binding protein is used in a drug having antithrombotic activity. Glycoprotein Ib-binding protein has a high binding activity to glycoprotein Ib- a long half life/drug efficacy retention in blood, and low antigenicity. This polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GATCGGTATTGCTACAAGCCCTTCAAACAAGAGATGACCTGGGCCGATGCAGAGAGGTTC

The invention relates to new pigmy rattlesnake (Sistrurus miliarius)
venom gland proteins, which affect blood coagulation and platelet
aggregation system. The polypeptides, which affect blood coagulation and
platelet aggregation system, are useful in therapy and diagnostics. The
polypeptides are also useful as an educational tool in laboratory
protein chemistry and antibody production and analysis. The
polymucleotide or polypeptide can be used as standards or as unknowns
polymucleotide or polypeptide are also useful in identifying
proteins by western blotting, protein purification, determining the
weight of expressed polypeptides as a ratio to total protein expressed,
then the protein cleavage sites, coupling amino and carboxyl terminal
tags, mass spectrometry, circular dichroism to determine conformation or
affinity chromatography columns to purify the protein, cloning or
sequencing. The present sequence is Sistrurus miliarius venom gland

        agglegation system, are useful in therapy and diagnostics. The polypeptides are also useful as an educational tool in laboratory polypeptides are also useful as an educational tool in laboratory practical kits for courses related to genetics and molecular biology, protecin chemistry and antibody production and analysis. The polymucleotide or polypeptide can be used as standards or as unknowns for testing purposes. The polypeptides are also useful in identifying proteins by western blotting, protein purification, determining the weight of expressed polypeptides as a ratio to total protein expressed, identifying peptide cleavage sites, coupling amino and carboxyl terminal tags, mass spectrometry, circular dichroism to determine conformation or sequencing. The present sequence is Sistrurus miliarius venom gland
                                                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           : | : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | | : | : | | : | : | | : | : | | : | : | | : | : | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241 AGTTATGAGAATTGGATTGAAGAAGAATCCAAAAAGTGTCTTGGGGTGCACATAGAGACA 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to new pigmy rattlesnake (Sistrurus miliarius) venom gland proteins, which affect blood coagulation and platelet pagregation system. The polypeptides, which affect blood coagulation and platelet aggregation system, are useful in therapy and diagnostics. The polypeptides are also useful as an educational tool in laboratory practical kits for courses related to genetics and molecular biology, protein chemistry and antibody production and analysis. The polympetide can be used as standards or as unknowns for testing purposes. The polypeptides are also useful in identifying proteins by western blotting protein purification, determining the weight of expressed polypeptides as a ratio to total protein expressed, identifying peptide cleavage sites, coupling amino and carboxyl terminal ages, mass spectromeetry, circular dichroism to determine conformation or the states are also used as determined or as a succession of the symmetry of circular dichroism to determine conformation or the states, mass spectromeetry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GGGTTTCATAAGTGGGAGAATTTTTACTGTGAACAACAAGATCCTTTTGTCTGCGAG 357

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAQ89308 is a snake venom cDNA used in the prepn. of AAQ89309, which encodes AAR71981 a snake venom oligopeptide. From this oligopeptide claimed antithrobtic peptides where derived, the peptides had the advantage of avoiding significant thrombocytopenia when administered at the minimun dose, for in vivo inhibition of platelet von Willebrand

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  127 TACCTCACGTTATATCTGGATTGGACTGAGGGTTCAAAACAAAGGACAGCCATGCTCC 186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           subunit using a protein denaturing agent in a solution, removing the agent in the presence of a polyoxyalkyl polyether which removing the agent in the presence of a polyoxyalkyl polyether which reacts with a thiol group and unwinds the subunit, and separating the polyoxyalkyl polyether-bound subunit peptide. The method can be used for producing physiologically-active subunit peptides for polymer proteins e.g. snake venom-originated dimer peptide with blood platelet-inhibitory activity on von Willebrand's factor. The peptides produced have platelet-binding inhibitory, and thrombolytic activity. The present sequence represents a method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a method for the production of a subunit peptide originating from a polymer protein with disulphide bonds within and between subunits. The method comprises denaturing the protein or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  34 AAGACCTGGACAGATGCAGAGGTTCTGCACGAAGCAGGTGAACGGGGGGCATCTGGTC 93

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
